Security has been a major issue since E-mail ID is used for registration on various platforms. Email-Ids are linked to Bank Accounts, Social Security Passwords, Net Banking which involves Money and any cyber theft through such accounts will lead to unbearable losses.

FortiMates is an approach to secure one's identity by providing double level verification system of both fingerprint Scan and face recognition powered by AI which validates the user's account and thus avoid misuse of identity & fraudulent mails.

FortiMates verifies the origin of the sender through a QR code which displays the sender's identity to the receiver. The receiver can know the sender's details as long as he is a registered and verified user. This creates a legally binding obligation.

Our Unique Selling Proposition

- ✓ E-mail fraud elimination.
- ✓ Identity assertion.
- ✓ Secure communication.
- ✓ Segregated Mailbox.
- ✓ Mail prioritization.

The e-mail will include a **face recognition** that can be flashed in order to receive information about the sender.
